Experiment-12

12. Demonstrate virtualization by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux).

AIM

To demonstrate virtualization by installing VMware Workstation (Type-2 Hypervisor) and creating and configuring a Virtual Machine with a guest operating system (Ubuntu Linux/Windows).

PROCEDURE

Step 1: Install VMware Workstation

- Download VMware Workstation from the official website.
- Run the installer and complete the installation.
- Restart the system if prompted.

Step 2: Open VMware Workstation

- Launch VMware Workstation.
- Click Create a New Virtual Machine.

Step 3: Choose Configuration

- Select Typical (Recommended).
- Click Next.

Step 4: Select Installation Source

- Choose Installer disc image file (ISO).
- Browse and select the Ubuntu (or Windows) ISO file.
- Click Next.

Step 5: Select Guest Operating System

- Choose Linux → Ubuntu 64-bit (or Windows).

- Click Next.

Step 6: Configure the Virtual Machine

- Enter the Virtual Machine name.
- Select the storage location.
- Allocate hardware resources:
 - Processor: 1 CPU
 - Memory: 2 GB RAM
 - Hard Disk: 15 GB

Step 7: Finish the Configuration

- Click Finish.
- The Virtual Machine is created.

Step 8: Install the Guest Operating System

- Power on the Virtual Machine.
- Follow the installation steps of Ubuntu (or Windows).

Step 9: Verify the Virtual Machine

- Log in to the guest operating system.
- Verify that the VM is running successfully.

STEP 1: Click Create a New Virtual Machine.

STEP 2: Select Typical (Recommended). Click Next.

Step 5: Select Guest Operating System

- Choose Linux → Ubuntu 64-bit (or Windows).

- **Click Next.**

Step 6: Configure the Virtual Machine

- **Allocate hardware resources:**
 - **Processor: 1 CPU**

- **Memory: 2 GB RAM**
- **Hard Disk: 15 GB**

OUTPUT
