

CSA1503-CLOUD COMPUTING AND BIG DATA ANALYTICS

Experiment-14

Create a Virtual Hard Disk and allocate the storage using VMware Workstation

AIM

To create a Virtual Hard Disk (VMDK) and allocate storage using VMware Workstation (Type 2 Hypervisor).

PROCEDURE

Step 1:

Open VMware Workstation.

Step 2:

Click Create a New Virtual Machine.

Step 3:

Select Typical (Recommended) and click Next.

Step 4:

Choose I will install the operating system later and click Next.

Step 5:

Select the Guest Operating System (e.g., Linux → Ubuntu 64-bit) and click Next.

Step 6:

Enter the Virtual Machine Name and choose the location to save the virtual machine.

Step 7:

In the Specify Disk Capacity window, enter the required disk size (e.g., 15 GB) and choose Store virtual disk as a single file.

Step 8:

Click Customize Hardware (if required) and verify the hardware settings.

Step 9:

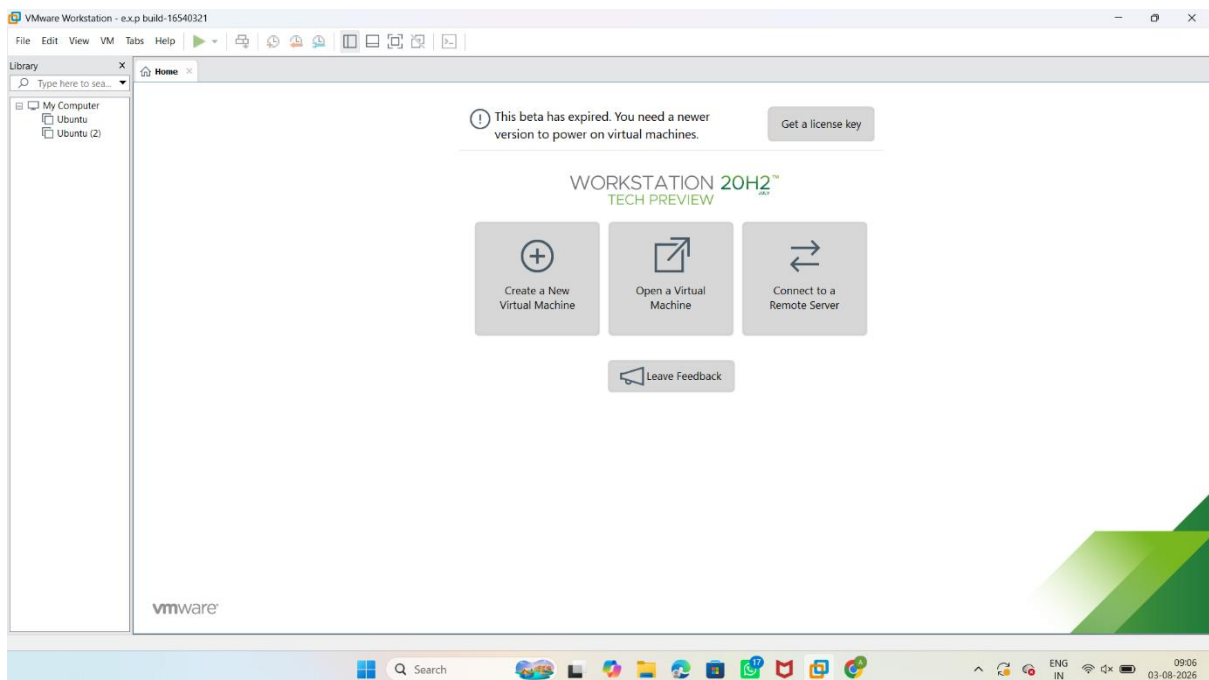

Click Finish to create the virtual machine. VMware automatically creates the Virtual Hard Disk (.vmdk) and allocates the specified storage.

Step 10:

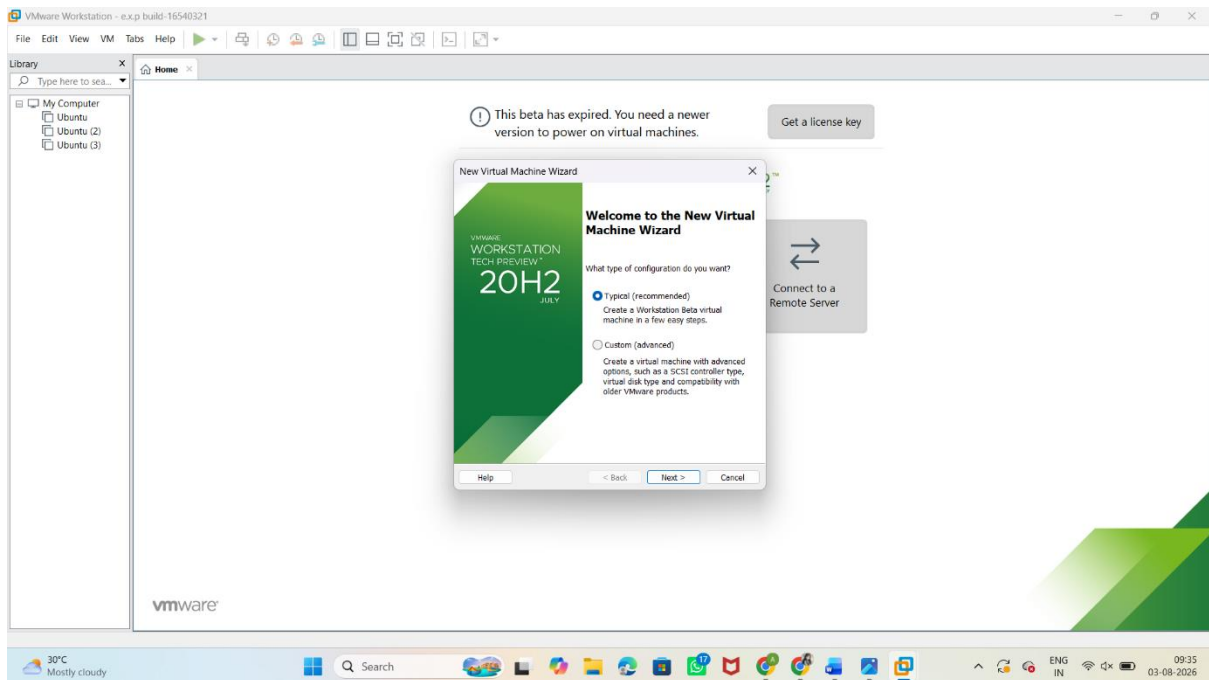

Verify that the virtual hard disk has been created by checking the virtual machine folder or the VMware settings.

IMPLEMENTATION

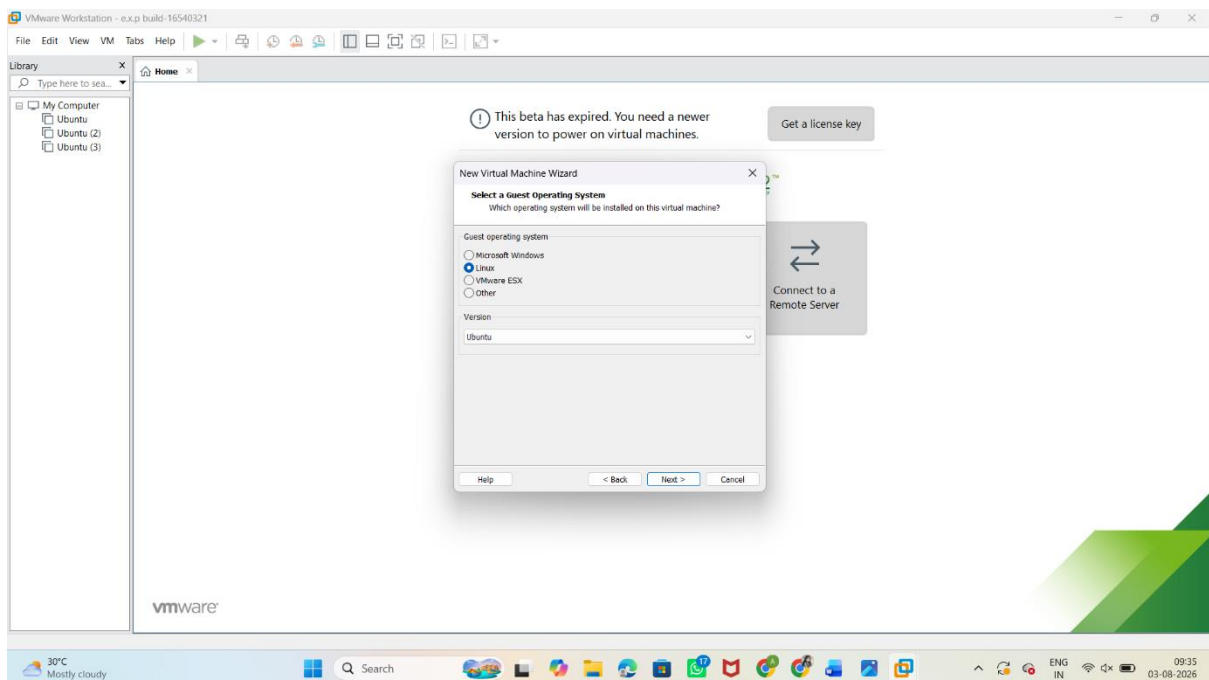

STEP 1: Open VMware Workstation and Click Create a New Virtual Machine.

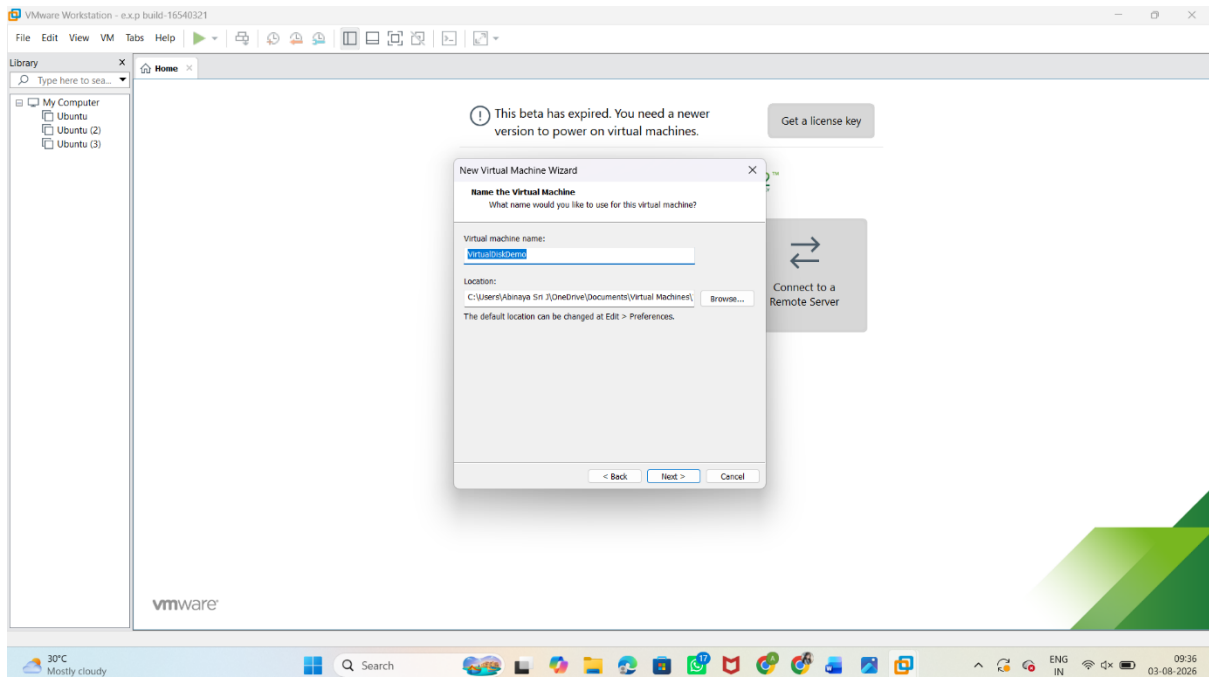

STEP 2: Select Typical (Recommended) and click Next.

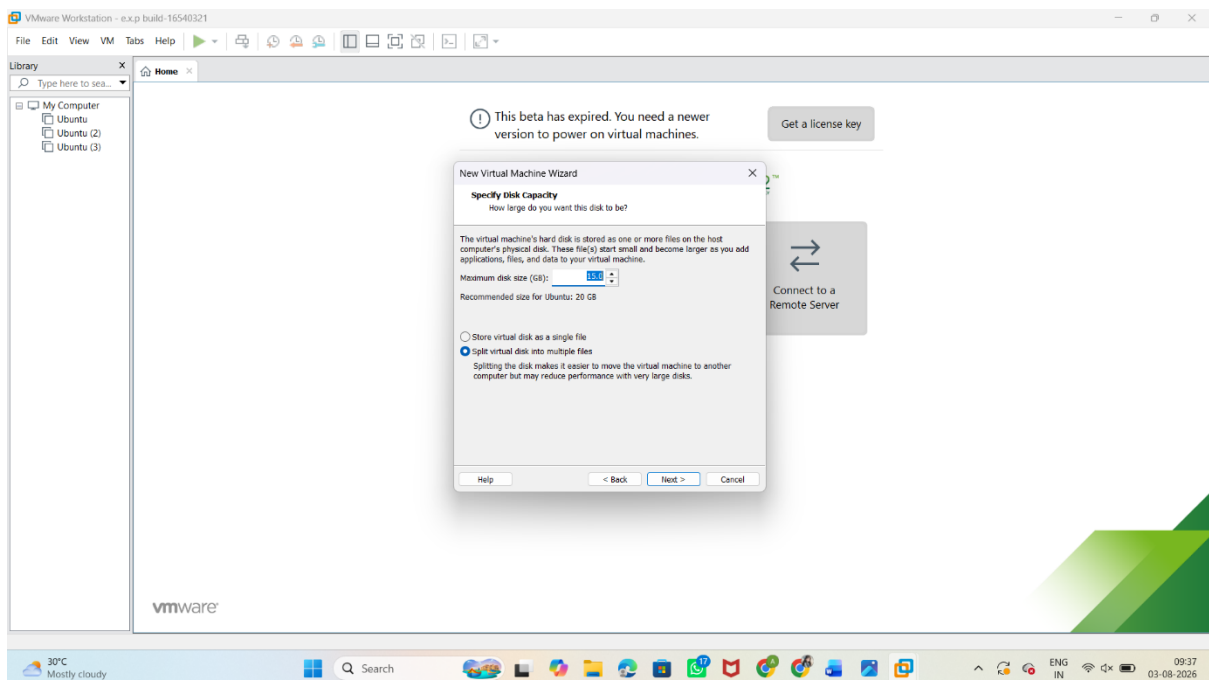

STEP 3: Select the Guest Operating System (e.g., Linux → Ubuntu 64-bit) and click Next.

STEP 4: Enter the Virtual Machine Name and choose the location to save the virtual machine.

STEP 5: In the Specify Disk Capacity window, enter the required disk size (e.g., 15 GB) and choose Store virtual disk as a single file.

OUTPUT:
